

Front end test

Angular application (latest version) that consumes the next API Rest

"<https://rickandmortyapi.com/>" and does the following:

- Implement Redux and save the data and actions of the events that are taking place in the store.

- Loading pages by lazy loading.

- Character page:

 - Show character list

 - when clicking on a character redirects to the character's detail.

- Locations screen:

 - Show list of locations

 - when clicking on a location, show the list of characters.

- Episode screen:

 - Show episode list

 - when clicking on an episode, show the list of characters.

- Search:

 - Implement a search that, depending on the page you are on, filters by "name" characters, locations of episodes.

- Nice to have: perform unit tests with 20% of coverage
